

Michio Honda

Informatics Forum, 10 Crichton Street, Edinburgh EH8 9AB, UK
michio.honda@ed.ac.uk • +44 (0)7985 279570 • <https://micchie.net>

INTERESTS	Operating Systems, Networking, Distributed Systems, Machine Learning	
EDUCATION	Keio University, Tokyo Japan	
	Ph.D. in Graduate School of Media and Governance Program: Cyber Informatics Thesis: The Internet is not an Internet—Principles, Evasion and Implications for Transport Protocols	Apr 2009 – Mar 2012
	M.S. in Graduate School of Media and Governance Program: Cyber Informatics Thesis: Bidimensional-Probe Multipath Congestion Control for Shared Bottleneck Fairness	Apr 2007 – Mar 2009
	B.S. in Faculty of Environment and Information Studies Thesis: Fast Transport Layer Handover Using Single Wireless Interface	Apr 2003 – Mar 2007
WORK EXPERIENCE	Lecturer, School of Informatics, The University of Edinburgh, UK Senior research scientist, NEC Laboratories Europe, Heidelberg, Germany Software engineer, NetApp, Munich, Germany Research scientist, NEC Laboratories Europe, Heidelberg, Germany Part-time lecturer, Keio University, Japan	Jan 2020 – present Nov 2016 – Dec 2019 Dec 2014 – Oct 2016 Jul 2012 – Nov 2014 Apr 2011 – Mar 2012
RESEARCH EXPERIENCE	Visiting student researcher, University College London (UCL), London, UK Advisor: Prof. Mark Handley Focus: Middlebox, Multipath Transport Protocol. Research intern, Nokia Research Center, Espoo, Finland Advisor: Dr. Lars Eggert Focus: Multipath Transport Protocol.	Apr 2010 – Sep 2010 Jul 2008 – Jan 2009
AWARDS	Best paper award, ACM SOSR'15 Community award, USENIX NSDI'12 Applied Networking Research Prize (ANRP), 82th IETF meeting	Jun 2015 Apr 2012 Nov 2011
RECENT RESEARCH	A Storage Stack for SoC-Based Accelerators HotStorage'20 This work is motivated by the slow storage access in the applications that run in the PCIe-attached accelerator devices equipped with general-purpose CPU cores in addition to the specialized ones. It explores direct storage access architecture that bypasses the host CPUs, process or kernel, while providing useful abstractions to the applications. PASTE: A Network Stack for Non-Volatile Main Memory NSDI'18, HotNets'16, ATC'16 PASTE is a network stack that offers unified abstractions of network and non-volatile main memory. It fills the gap between the storage and network stacks designed in isolation, and solves the problem with the costs of moving and transforming data between these stacks that are significant for non-volatile main memory that offers fast, byte-addressable persistence. mSwitch: A Highly-Scalable, Modular Software Switch SOSR'15, CCR'14, NSDI'14, SoCC'17 mSwitch solves the scalability problem of existing software switches that is crucial to consolidate a large number of VMs or virtualized network functions by a novel packet forwarding algorithm and streamlined data path. It was initially designed for ClickOS, a tiny unikernel that runs Click, and MultiStack, a framework that runs multiple user-space network stacks. Middlebox Measurement for TCP Extensibility IMC'11, NSDI'12 This work was motivated by exploring viable design of Multipath TCP. It transmits various non-existent TCP traffic that mimics possible future TCP extensions to our server and examines on-path actions to the packets. This is the first work that examines in-depth middlebox behaviour prevalent in the Internet.
