

Michio Honda

Room 1.02a, Informatics Forum, 10 Crichton Street, Edinburgh EH8 9AB, UK
michio.honda@ed.ac.uk • <https://micchie.net>

INTERESTS	Computer Networks, Operating Systems and Security		
EDUCATION	Keio University , Tokyo, Japan		
	Ph.D. in Graduate School of Media and Governance, Cyber Informatics	Apr 2009 – Mar 2012	
	Thesis: The Internet is not an Internet—Principles, Evasion and Implications for Transport Protocols		
	M.S. in Graduate School of Media and Governance, Cyber Informatics	Apr 2007 – Mar 2009	
	Thesis: Bidimensional-Probe Multipath Congestion Control for Shared Bottleneck Fairness		
	B.S. in Faculty of Environment and Information Studies	Apr 2003 – Mar 2007	
	Thesis: Fast Transport Layer Handover Using Single Wireless Interface		
EMPLOYMENT	University of Edinburgh, School of Informatics , Edinburgh, UK		
	Reader (Associate Professor)	Aug 2024 – present	
	Lecturer in Networked Systems (Assistant Professor)	Jan 2020 – Jul 2024	
	Senior researcher , NEC Laboratories Europe, Heidelberg, Germany	Nov 2016 – Dec 2019	
	Software engineer , NetApp, Munich, Germany	Dec 2014 – Oct 2016	
	Research scientist , NEC Laboratories Europe, Heidelberg, Germany	Jul 2012 – Nov 2014	
OTHER EXPERIENCE	Visiting student researcher , University College London (UCL), London, UK	Apr 2010 – Sep 2010	
	Advisor: Prof. Mark Handley		
	Focus: Middlebox, Multipath Transport Protocol.		
	Research intern , Nokia Research Center, Espoo, Finland	Jul 2008 – Jan 2009	
	Advisor: Dr. Lars Eggert		
	Focus: Multipath Transport Protocol.		
AWARDS	Google Research Scholar Award *	Apr 2022	
	Facebook Research Award *	Aug 2021	
	Best paper award , ACM SOSR'15 *	Jun 2015	
	Community award , USENIX NSDI'12	Apr 2012	
	IRTF Applied Networking Research Prize (ANRP) *	Nov 2011	
	* as the sole recipient or lead author		
SELECTED PROJECTS	Secure datacenter transport protocol	Oakland'26, NDSS'26	
	SMT is a new encrypted transport protocol designed for low-latency datacenter transports. It refines TLS with per-message record sequence number spaces to avoid head-of-line blocking, while preventing replay attacks. Looma enables low-latency TLS handshake with post-quantum resistance and mutual authentication in the cloud, using an online/offline signature scheme.		
	Host stack support for traffic analysis attack defenses	HotNets'25	
	Traffic analysis attacks like website fingerprinting is a growing threat to the encrypted Internet traffic. Stob is a framework that integrates traffic obfuscation directly in the host network stack. Its design rational is that packet-level features that the attacks exploit, like sizes, bursts and timing, are determined at the transport layer or below.		
	Flexible TCP scale-out	NSDI'26, NSDI'21	
	Prism is a new layer 7 load balancing (L7LB) architecture that enables the backend server to return the response to the client directly, bypassing the L7LB device. Prism uses TCP connection migration with the aid of programmable switches; XO enables similar features to Prism but without switch support, and integration with real applications like Nginx and Ceph.		
	Network stack design for modern hardware	ATC'25, HotNets'21, NSDI'18, HotNets'16, ATC'16	
	PASTE is a network stack that offers unified abstractions of network and non-volatile main memory. It fills the gap between the storage and network stacks designed in isolation, and solves the problem with the costs of moving and transforming data between these stacks that are significant for non-volatile main memory that offers fast, byte-addressable persistence.		
	Scalable virtual networking	SOSR'15, CCR'14, NSDI'14, SoCC'17	
	mSwitch solves the scalability problem of existing software switches that is crucial to consolidate a large number of VMs or virtualized network functions by a novel packet forwarding algorithm and streamlined data path. It was initially designed for ClickOS, a tiny unikernel that runs Click, and MultiStack, a framework that runs multiple user-space network stacks.		
	Middlebox measurement for TCP extensibility	IMC'11, NSDI'12	

This work was motivated by exploring viable design of Multipath TCP. It transmits various non-existent TCP traffic that mimics possible future TCP extensions to our server and examines on-path actions to the packets. This is the first work that examines in-depth middlebox behaviour prevalent in the Internet.

PROFESSIONAL SERVICE	UNIVERSITY OF EDINBURGH		
	People and Culture committee	2022–present	
	Programming Club, organizer	2020–present	
PROFESSIONAL SOCIETY	ACM SIGOPS, CARES Committee co-chair	2023–present	
	IRTF ANRP Award Committee	2022–present	
	ACM SIGOPS, CARES Committee	2021–2022	
CONFERENCE PROGRAM COMMITTEE	USENIX NSDI (2023, 2026), ACM EuroSys (2021, 2024–2026), USENIX OSDI (2025–2026), ACM SIGCOMM (2024–2026), ACM APSYS (2024–2025), ACM HotNets (2024), ACM ASPLOS (2024), USENIX ATC (2017, 2018, 2020–2024), ACM HotStorage (2022–2025), ACM/IEEE ANCS (2018, 2021 (co-chair)), ACM CoNEXT (2021–2022), ACM/IEEE SC (2019), ACM SOSR (2018), ACM EuroDW (2018, ACM/IEEE ToN (2017–2018), ACM SOSP poster (2013)		
TEACHING	Introduction to Programming (Informatics) Summer , University of Edinburgh	July 2021 and 2022	
	Computer Communications and Networks , University of Edinburgh	Fall 2021–present	
	Data Structures and Programming , Keio University	Fall 2011	
	Fundamentals of Information Technology , Keio University	Spring 2011	
MENTORING	UNIVERSITY OF EDINBURGH		
	Elisaveta Lavrentieva, PhD supervision (equal co-supervision with Marc Juarez)	Fall 2024	
	Michael Zhang, Internship mentoring (ICSA Summer Internship)	Summer 2024	
	Eugenio Luo, Internship mentoring (EPSRC Vacation Internship)	Summer 2024	
	Xinshu Ma, PhD supervision	Fall 2023	
	Tianyi Gao, PhD supervision	Fall 2022	
	Tianyi Gao, MSc and intern supervision	Spring 2022	
	Steven W. D. Chien, Postdoc → assistant professor at the University of St Andrews.	March 2022–September 2025	
	Shuo Li, PhD supervision	Fall 2021	
	Shinichi Awamoto, PhD supervision	Spring 2021	
NETAPP	Nanako Momiyama , BSc thesis supervision, Keio University	Fall 2016	
	Yutaro Hayakawa , BSc thesis intern at NetApp, Keio University	Fall 2016	
	Kenichi Yasukata , MSc thesis intern at NetApp, Keio University	Fall 2015	
	NEC LABS EUROPE		
	Shinichi Awamoto, intern at NEC, Tokyo University	Fall 2019	
GRANTS	Yutaro Hayakawa , MSc thesis intern at NEC, Keio University	Fall 2018	
	Nanako Momiyama , intern at NEC	Spring 2017	
	Kenichi Yasukata , mentor at NEC	Fall 2016	
	GLOBAL		
	NetApp Faculty Fellowship , \$50K, sole PI	Jan 2023	
	Towards Generic, Encrypted Datacenter Transport		
	Google Research Scholar Award , \$60K, sole PI	May 2022	
	Upcycling Packets as Persistent In-Memory Data Structures		
	Facebook Research Award , \$50K, sole PI	Nov 2021	
	Flexible transport scale-out with modern NICs		
REGIONAL (UK/EU)	EPSRC Core Equipment Award , £50K (my share), Co-I	Jan 2025 – Jun 2026	
	(my part) Systems Research Testbed		
	Royal Society Research Grant , £20K, sole PI	Oct 2024 – Oct 2025	
	Confidential Computing at a Scale		
	EPSRC Core Equipment Award , £35K (my share), Co-I	Jan 2023 – Mar 2023	
	(my part) Systems Research Testbed		
	EPSRC New Investigator Award , £385K, sole PI	Apr 2022 – Mar 2025	
	NetPM: Co-designing Data Management and Networking Principles for Persistent Memory		
	NCSC RISE Proof-of-Concept , £45K, co-PI	Oct 2021 – Mar 2022	
	Follow on Project: Gupta - A Hardware Assisted Secure and Private Data Analytics		

OTHER HONORS	Nominee for Teaching Award , Outstanding Course category, University of Edinburgh	Apr 2023
STUDENT SCHOLARSHIP	Research Fellowship for Young Scientists (DC1) Japan Society for the Promotion of Science, 9.2M JPY	Apr 2009 – Mar 2012
	Excellent Young Researcher Overseas Visit Program Japan Society for the Promotion of Science, 1M JPY	Apr 2010
	Young Leader Scholarship Keio University, 1M JPY	Apr 2009
