Michio Honda

Room 1.02a, Informatics Forum, 10 Crichton Street, Edinburgh EH8 9AB, UK
michio.honda@ed.ac.uk • +44 (0)131 650 2710 • https://micchie.net

INTERESTS
Computer Networks and Operating Systems

EDUCATION
Keio University, Tokyo Japan

Ph.D. in Graduate School of Media and Governance   Apr 2009 – Mar 2012
  Program: Cyber Informatics
  Thesis: The Internet is not an Internet—Principles, Evasion and Implications for Transport Protocols

M.S. in Graduate School of Media and Governance   Apr 2007 – Mar 2009
  Program: Cyber Informatics
  Thesis: Bidimensional-Probe Multipath Congestion Control for Shared Bottleneck Fairness

B.S. in Faculty of Environment and Information Studies   Apr 2003 – Mar 2007
  Thesis: Fast Transport Layer Handover Using Single Wireless Interface

WORK EXPERIENCE
Lecturer (Assistant Professor), School of Informatics, University of Edinburgh   Jan 2020 – present
Senior researcher, NEC Laboratories Europe, Heidelberg, Germany   Nov 2016 – Dec 2019
Software engineer, NetApp, Munich, Germany   Dec 2014 – Oct 2016
Research scientist, NEC Laboratories Europe, Heidelberg, Germany   Jul 2012 – Nov 2014

RESEARCH EXPERIENCE
Visiting student researcher, University College London (UCL), London, UK   Apr 2010 – Sep 2010
  Advisor: Prof. Mark Handley
  Focus: Middlebox, Multipath Transport Protocol.
Research intern, Nokia Research Center, Espoo, Finland   Jul 2008 – Jan 2009
  Advisor: Dr. Lars Eggert
  Focus: Multipath Transport Protocol.

AWARDS
Google Research Scholar Award *   Apr 2022
Facebook Research Award, Networking Request for Proposals *   Aug 2021
Best paper award, ACM SOSR'15 *   Jun 2015
Community award, USENIX NSDI'12   Apr 2012
IRTF/ISOC Applied Networking Research Prize (ANRP) *   Nov 2011
* as the sole investigator or lead author

RECENT RESEARCH

Prism: Content-Aware Routing over TCP   NSDI'21
Prism enables content-aware routing of arbitrary-sized, encrypted application data over TCP, unlike the existing systems that rely on a custom UDP-based protocol. Prism modernizes the TCP handoff in the aid of programmable switches for robust operation and conformance to relevant features in recent Linux kernels.

PASTE: A Network Stack for Non-Volatile Main Memory   HotNets'21, NSDI'18, HotNets'16, ATC'16
PASTE is a network stack that offers unified abstractions of network and non-volatile main memory. It fills the gap between the storage and network stacks designed in isolation, and solves the problem with the costs of moving and transforming data between these stacks that are significant for non-volatile main memory that offers fast, byte-addressable persistence.

A Storage Stack for SoC-Based Accelerators   HotStorage'20
This work is motivated by the slow storage access in the applications that run in the PCIe-attached accelerator devices equipped with general-purpose CPU cores in addition to the specialized ones. It explores direct storage access architecture that bypasses the host CPUs, process or kernel, while providing useful abstractions to the applications.

mSwitch: A Highly-Scalable, Modular Software Switch   SOSR'15, CCR'14, NSDI'14, SoCC'17
mSwitch solves the scalability problem of existing software switches that is crucial to consolidate a large number of VMs or virtualized network functions by a novel packet forwarding algorithm and streamlined data path. It was initially designed for ClickOS, a tiny unikernel that runs Click, and MultiStack, a framework that runs multiple user-space network stacks.

Middlebox Measurement for TCP Extensibility   IMC'11, NSDI'12
This work was motivated by exploring viable design of Multipath TCP. It transmits various non-existent TCP traffic that mimics possible future TCP extensions to our server and examines on-path actions to the packets. This is the first work that examines in-depth middlebox behaviour prevalent in the Internet.

COMMUNITY	**USENIX NSDI, Program Committee**	2023
SERVICE	**USENIX ATC, Program Committee**	2017, 2018 and 2020–2023
	ACM HotStorage, Program Committee	2022
	USEINX OSDI, Preview Session (OS & Hardware)	2021
	ACM/IEEE ANCS, Program Committee co-chair	2021
	ACM CoNEXT, Program Committee	2021 and 2022
	ACM EuroSys, Program Committee and Registration/Finance co-chair	2021

	ACM/IEEE SC, Program Committee	2019
	ACM/IEEE ANCS, Program Committee	2018
	ACM SOSR, Program Committee	2018
	ACM EuroDW, Program Committee	2018
	ACM/IEEE ToN, Reviewer	2017–2018
	ACM SOSP poster, Program Committee	2013

TEACHING	**Introduction to Programming (Informatics) Summer**, University of Edinburgh	July 2021 and 2022
	Computer Communications and Networks, University of Edinburgh	Spring 2021 and 2022, and fall 2022
	Data Structures and Programming, Keio University	Fall 2011
	Fundamentals of Information Technology, Keio University	Spring 2011

UNIVERSITY SERVICE	**People and Culture, committee member**	2022–present
	Programming Club, organizer	2020–present

MENTORING	Tianyi Gao, primary PhD supervision, University of Edinburgh	Fall 2022
	Tianyi Gao, MSc and intern supervision, University of Edinburgh	Spring 2022
	Steven W. D. Chien, Postdoc supervision, University of Edinburgh	Spring 2022
	Shuo Li, primary PhD supervision, University of Edinburgh	Fall 2021
	Shinichi Awamoto, primary PhD supervision, University of Edinburgh	Spring 2021
	Shinichi Awamoto, intern at NEC, Tokyo University	Fall 2019
	Yutaro Hayakawa, MSc thesis intern at NEC, Keio University	Fall 2018
	Nanako Momiyama, intern at NEC	Spring 2017
	Kenichi Yasukata, mentor at NEC	Fall 2016
	Nanako Momiyama, remote BSc thesis supervision, Keio University	Fall 2016
	Yutaro Hayakawa, BSc thesis intern at NetApp, Keio University	Fall 2016
	Kenichi Yasukata, MSc thesis intern at NetApp, Keio University	Fall 2015

GRANTS (exhaustive)	**GLOBAL**	
	NetApp Faculty Fellowship, $50K, sole PI	Jan 2023
	Towards Generic, Encrypted Datacenter Transport	
	Google Research Scholar Award, $60K, sole PI	May 2022
	Upcycling Packets as Persistent In-Memory Data Structures	
	Facebook Research Award, $50K, sole PI	Nov 2021
	Flexible transport scale-out with modern NICs	
	UK/EU	
	EPSRC New Investigator Award, £385K, sole PI	Apr 2022 – Mar 2025
	NetPM: Co-designing Data Management and Networking Principles for Persistent Memory	
	NCSC RISE Proof-of-Concept, £45K, co-PI	Oct 2021 – Mar 2022
	Follow on Project: Gupt - A Hardware Assisted Secure and Private Data Analytics	

R&D COLLABORATIONS	**Fed4IoT** (H2020 No. 814918)	Jul 2018 – Dec 2020
	The Federation for IoT (Fed4IoT) project aims at integrating heterogeneous IoT platforms and devices by virtualizing resources at multiple levels, including devices, platforms and information. Project volume is € 3 million in total.	
	SSICLOPS (H2020 No. 644866)	Feb 2014 – Jan 2018
	The Scalable and Secure Infrastructures for Cloud Operations (SSICLOPS) focuses on cloud networking techniques in software-defined data centers and across wide-area networks. Project volume is € 7 million.	

SCHOLARSHIP	**Research Fellowship for Young Scientists (DC1)**	Apr 2009 – Mar 2012
	Japan Society for the Promotion of Science, 9.2M JPY	
	Excellent Young Researcher Overseas Visit Program	Apr 2010
	Japan Society for the Promotion of Science, 1M JPY	
	Young Leader Scholarship	Apr 2009
	Keio University, 1M JPY
